GreenFolders Release Notes

Version 2.6.x

What's New in GreenFolders 2.6.x

The following defects have been fixed in 2.6

- 842: Rotating is slow and has memory problems
- 1039: SQL Injection on advanced searching
- 1114: Folder Tab control loses selection functionality when copy to
- 1116: Field layout: selected tab moves to first tab after clicking add button
- 1141: On my settings when you click on a theme it jumps you back to the general tab
- 1179: If you change the extension of an attachment, the extension is only changed in memory not on the attachment that is in the temp folder
- 1201: Opening a new window (preview window, open in new window) should try to be more consistent with where the window is placed
- 1311: Don't allow exporting of applications that have external database stores
- 1327: When changing themes some styles do not update properly
- 1356: Create new DB localization problem if database was deleted manually
- 1377: Adding a document into a file which contains a frozen attachment, gets an error
- 1432: Form Tab loses selection when a field is selected
- 1436: Int fields that are rendered as checkboxes fail to save their values in the database
- 1449: GreenFolders crashes seemingly at random when sharing to email with Office 2000
- 1468: Folder is marked as an older revision while adding attachments to it from Add attachments screen
- 1481: Don't show print button on tasks screen (users think they are able to print tasks)
- 1482: Incorrect index exception when rotating images
- 1484: Exception when trying to de-serialize the GUIConfig file
- 1488: When clicking a thumbnail load image is called twice
- 1492: Opening Advanced Search doesn't release memory when you close the tab
- 1494: Entering Custom Annotations Screen makes default selection dirty without changing anything on Windows 7
- 1496: Memory spikes on attachments with lots of annotations
- 1497: Repeatedly opening folders causes memory to blow up and never come back
- 1502: You cannot delete more than 1 folder type at a time
- 1508: Upgrading database from 2.5 to 2.5.1 failed the first time but succeeded the second
- 1513: Error: Assigning documents in my Inbox
- 1516: TransitionEffect not cleaning up properly
- 1519: Object null error when performing a folder action from Streamline
- 1524: Exception when Imported fields with duplicate names
- 1526: Reverse Selecting Pages and rotating results in bad annotation rotation
- 1527: Able to create a folder type with Invalid characters
- 1530: Annotations move on page after opening in a new window
- 1533: check all/uncheck all buttons on add attachments screen don't follow theme
- 1536: crash exception during finalization of GFAnnotateViewer.
- 1547: un-escape invalid xml characters when retrieving document and packages from Simplifile

- 1549: Print Driver - Add Files Dialog has bad theme
- 1551: Simplifile - Downloaded documents automatically get notes applied to them from the original attachment

The following defects have been fixed in 2.6.1

- 1576: Invalid XML in field layout after entering an & sign in the header text
- 1577: Received null object exception error after restarting service
- 1579 :Folder action cannot read folder type name using SL
- 1581: Burning annotation option does not always show up
- 1583: When importing fields into a folder type sometimes the fields show up in the list more than once

The following defects have been fixed in 2.6.2

- 1580: Error saving folder - Cannot insert duplicate labels into database
- 1586: GreenFolders crashes when viewing images if user doesn't have read permission on registry

The following defects have been fixed in 2.6.3

- 1483: Assigning tasks to a group you are a member of doesn't send emails
- 1582: Error viewing attachments, cannot retrieve icon image
- 1591: Cannot import a folder type from a template that contains external fields
- 1592: Streamline sync failed... better exception handling needed
- 1593: Configure Layout default style for background overrides current
- 1594: Advanced search error when leaving a Guid field blank
- 1604: GUI Configuration file is being overwritten and erased randomly - Users have to re-enter server information
- 1605: Remember Me doesn't work when using the print driver
- 1613: When printing folder notes the "Notes" label is cut off on some printers
- 1618: Inbox Items with 0 kb throw exception when you try to access them
- 1644: Renaming attachment type doesn't work, new attachment type doesn't show up in the lists
- 1645: Closing site plugin, after downloading attachment user gets an auditing error
- 1651: Inbox Exception when refresh button clicked
- 1652: When you run GreenFolders for the first time and activate, login credentials are not remembered
- 1654: Can't break lock through Add Attachments screen

The following defects have been fixed in 2.6.4

- 1666: Streamline: External Escrow Only folders are not found due to Pervasive Engine Bug
- 1677: GreenFolders crashes when viewing images if user doesn't have read permission on registry
- 1687: Cannot create/link to external databases that contain spaces in the database name
- 1688: Task detail labels overlap each other when users have long names
- 1680: Task Assign, Copy and Delete buttons don't show up on machines with higher resolutions
- 1682: Streamline: Buyers and Sellers that are Partnerships or Corporations don't show name values inside of GF
- 1683: Object Null Error When retrieving folder, users don't have attachment type permissions
- 1684: Index out of range Exception when merging large amounts of attachments

The following defects have been fixed in 2.6.5

- 1660: Null Buffer Exception when creating new annotations with invalid characters
- 1689: Could not find a part of the path Exception when cleaning temp directory

- 1691: Path not found exception when saving file to disk
- 1697: Problem adding files from Inbox when folder is already open
- 1698: External decimal fields show up with four 0's after the decimal instead of just two
- 1701: Copy a thumbnail with annotations by someone else allows user to modify annotation layer
- 1706: Annotations move when printing on a specific Tiff file
- 1707: Exception while initializing the Inbox and user doesn't have permission or path doesn't exist
- 1710: File in use Exception while reading theme config file
- 1711: Exception when cleaning temp folder on startup, user doesn't have privileges to delete files
- 1715: Index out of range exception when dragging attachments
- 1719: OpenClipboard Failed exception when adding snippet to clipboard
- 1721: Streamline: Sending files to Greenfolders changes folder status to default value
- 1722: Problem loading PDF file that is over 136 X 90 inches
- 1723: Upgrade from 2.5 to 2.6.4 caused GF to lose email server settings if "Send Emails From" value is empty
- 1725: Annotations move when copying thumbnail to a new attachment using png files
- 1740: User could not export a form that contain invalid characters
- 1741: Exception when first running the server configuration screen (using print driver)
- 1745: Object null error while canceling the rename of a file on the Inbox

The following defects have been fixed in 2.6.6

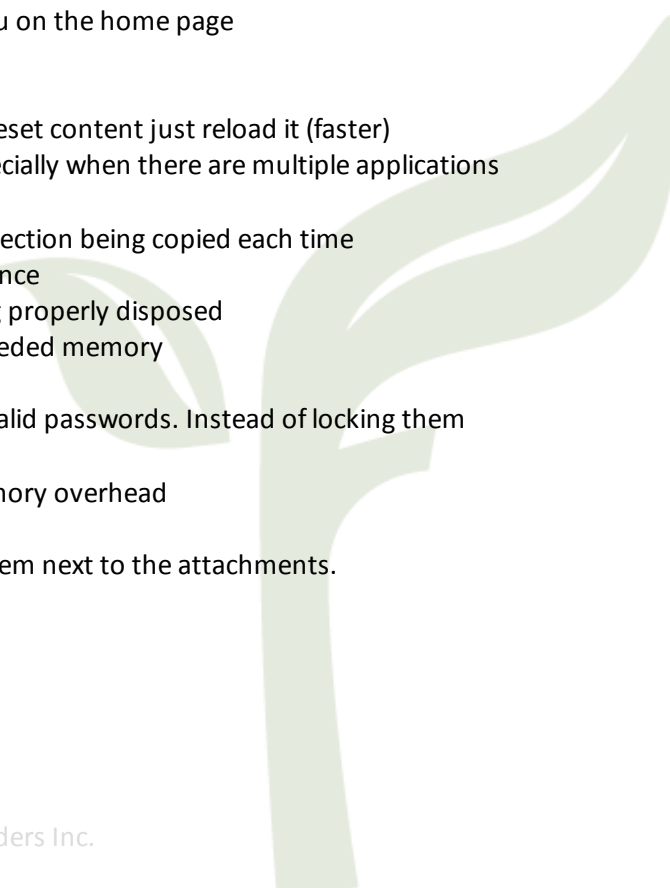

- 1774: Users with access to only 1 application and multiple folder types cannot see fields from the second folder type

The following defects have been fixed in 2.6.7

- 1783: Unable to render Large TIFF attachments, forces user to open in native program

The following enhancements have been added in 2.6:

- 1000: Export only folder columns that are being shown, not all values
- 1388: Add a 'Open In New Window' item to the context menu on the home page
- 1419: Speed Up Imaging, load images faster
- 1452: Add right click menu to inbox
- 1489: SetContent is being called when rotating, no need to reset content just reload it (faster)
- 1503: Increase speed when checking security privileges, especially when there are multiple applications and folder types
- 1505: Application and FolderType checks are slow due to collection being copied each time
- 1506: Reduce unnecessary exceptions to speed up performance
- 1507: Fix memory cleanup problems, memory was not being properly disposed
- 1511: Compress Folder Type display properties to reduce needed memory
- 1522: Increase performance when communicating to server
- 1523: Changed how long users are locked out after using invalid passwords. Instead of locking them out indefinitely
- 1531: Compress Custom Annotation Content to reduce memory overhead
- 1541: Increased RamQuest database integration
- 1543: Use the icons windows has for file types and display them next to the attachments.
- 1544: Add support for Money data type in SQL Server
